

## WANTED: LPs Cover-Scan-Contributions for the Funky Music Records Lexicon

I'm looking for some high-quality scans...

### Quality Scans means:

- **Scan with 300dpi resolution, in colour. That results in a cover-picture of around 3600x3600 pixel and a size of 35-40MB per picture.** I later use this size to partially edit the picture and making the size out of it that I need for the picture-gallery.
- Try to scan as horizontal as possible (to turn later is difficult and results in losing parts of the picture which is not good). Text or lines can help to check whether it's horizontal. Sometimes it needs 2-3 scans to get it fully horizontal.
- Don't use automatic picture-correction-programs while scanning (for example don't sharpen the pictures during scanning, just scan 1:1)
- Colour as similar as possible to the cover, which usually is if scanner is good
- Save in Windows (not Mac) **Format: .TIF** (which is not compressed!)
- Save to send on CD or USB-Stick (I pay for the media) or ask for Access to upload on my Website.
- File-Size, no problem to **send files** of 1-10 MB to my Email [funkymusic@bluewin.ch](mailto:funkymusic@bluewin.ch)

**Sample:** On a A3+-Scanner it's not possible to scan the whole 12"-cover, therefore pay attention that if ever possible not important parts of the picture are missing (for example label-number part of text or sometimes important cover-art). On the following sample I've tried that the text exactly fitted into the possible scan width, not cutting letters away – I was lucky it was possible.
